

Hasta Lagna, Rahu Rising

A full natal reading of the chart for 7 June 1996, 3:35 PM EDT, Pittsburgh. Every placement below is computed with the Swiss Ephemeris under one declared framework, and every delineation is separated from the technical fact that produced it.

LAGNA	RASHI (MOON)	JANMA NAKSHATRA	AYANAMSHA	CURRENT DASHA
22°16′ Virgo	15°09′ Aquarius	Shatabhisha 3	23°48′26″	Saturn / Venus

HOW THIS DOCUMENT IS SET

Three typographic registers run throughout, and they mark three *kinds of information*, not three astrological layers. Jyotisha does not supply a three-part hierarchy and none is implied here.

Monospace is computation: degrees, padas, virupas, dates, anything checkable against an ephemeris.

Serif is the traditional interpretive voice, what the classical sources hold. **Sans** is explanation in my own words, including every statement about what a placement might look like in a life.

Sanskrit terms are *italicised* in whichever face surrounds them rather than set apart in their own.

01 Technical foundation

Everything that follows depends on these choices, so they are stated before any interpretation rather than buried in it.

PARAMETER	CHOICE	NOTE
Ayanamsha	Lahiri (Chitrapaksha)	23.8073° at birth. The Indian government standard.
Zodiac	Sidereal	—
Bhava convention	Whole sign (rashi = bhava)	Parashari default. Sripati cusps cross-checked below.
Nodes	Mean node	True node differs by 63.4′. Same rashi, same nakshatra, same pada.
System	Parashari only	No Jaimini rashi drishti, no chara karakas, no Nadi.
Aspects	Graha drishti, sign-based	All grahas the 7th; Mars also 4th/8th; Jupiter 5th/9th; Saturn 3rd/10th.

The rashi chart

GRAHA	DEGREE	RASHI	BHAVA	NAKSHATRA	PADA	NAK. LORD	DIGNITY	MOTION
Sun	23°29′59″	Taurus	9	Mrigashira	1	Mars	enemy's sign	direct
Moon	15°09′20″	Aquarius	6	Shatabhisha	3	Rahu	neutral sign	direct

Mars	2°44′51″ Taurus	9	Krittika	2	Sun	neutral sign	direct
Mercury	0°16′53″ Taurus	9	Krittika	2	Sun	friend's sign	direct
Jupiter	22°05′33″ Sagittarius	4	Purva Ashadha	3	Venus	OWN SIGN	retrograde
Venus	28°01′11″ Taurus	9	Mrigashira	2	Mars	OWN SIGN	retrograde
Saturn	12°12′27″ Pisces	7	Uttara Bhadrapada	3	Saturn	neutral sign	direct
Rahu	20°13′09″ Virgo	1	Hasta	4	Moon	—	retrograde
Ketu	20°13′09″ Pisces	7	Revati	2	Mercury	—	retrograde
Lagna	22°16′00″ Virgo	1	Hasta	4	Moon	—	—
MC	24°52′18″ Gemini	10	Punarvasu	2	Jupiter	—	—

One caveat, and a correction to an earlier version of it

A CONVENTION ERROR, NOW FIXED

An earlier version of this document reported that *six of nine grahas* change bhava between whole sign and Sripati, and treated that as the reading’s largest vulnerability. **That figure was wrong, and it was wrong because of a mistake in my own code.**

I computed the cross-check by asking which cusp-to-cusp interval each graha fell into. That is the Western convention, in which a cusp *begins* a house. Jyotish does not use it. In bhava chalit the cusp is the *bhava madhya*, the midpoint, and the bhava runs from the sandhi halfway back to the previous madhya to the sandhi halfway on to the next. Treating a midpoint as a boundary displaces every graha by roughly half a bhava, which manufactured the divergence I then reported as a finding.

BHAVA CHALIT, COMPUTED CORRECTLY

Under Sripati proper — Porphyry trisection of the quadrants for the madhyas, sandhis at the midpoints — **two of nine grahas shift, not six.** Mars 9→8 and Mercury 9→8. Everything else holds: Moon stays in the 6th, Jupiter in the 4th, Saturn and Ketu in the 7th, Rahu in the 1st, Sun and Venus in the 9th. Taking Placidus cusps as madhyas instead of Porphyry gives the same two.

The correction runs the other way from the caveat it replaces. Most of this chart's structure is *convention-independent*, including the Hamsa yoga, Rahu on the Lagna, and the loaded 7th. The one thing genuinely at stake is how much of the ninth-house concentration survives, and section 16 tests every headline claim against it explicitly.

02 Lagna and Lagna lord

TECHNICAL

Lagna 22°16'00" Virgo, in *Hasta* nakshatra, pada 4, whose lord is the Moon. Hasta pada 4 falls in the Pisces navamsa. Lagna lord is Mercury, placed in Taurus in the 9th bhava, in a friend's sign, direct in motion, 23°13' from the Sun and therefore not combust. Mercury sits in Kritika pada 2, whose lord is the Sun. Mercury's dispositor is Venus, in its own sign in the same bhava. Mercury receives one aspect, Saturn's 3rd-house special drishti. It casts on the 3rd.

TECHNICAL FACT

Lagna lord Mercury is in the 9th, conjunct Venus (lord of the 9th and 2nd), the Sun (12th lord) and Mars (3rd and 8th lord). The Lagna lord is therefore not in the Lagna, not in a kendra, and is instead concentrated in a trikona alongside four other bodies, with its own dispositor Venus in own sign beside it.

CLASSICAL DELINEATION

A Lagna lord in the 9th is called well placed in classical Parashari terms: the 9th is the strongest trikona, the house of *dharma*, fortune, teachers, father and long journeys. The self is described as finding its footing through the 9th's matters rather than through the 1st's. That the Lagna lord also owns the 10th ties livelihood into the same package. Its placement with the 9th lord in the 9th lord's own sign is what makes the raja yoga in section 9 possible.

POSSIBLE LIVED EXPRESSIONS

Plural and probabilistic, and the tradition does not pick between them:

- A sense of self built more around belief, orientation or field of interest than around body or personality
- Formative influence from teachers, mentors, older figures or a tradition, rather than self-invention
- Identity that travels well, and may be clarified by distance from where one started
- Work and worldview tending to fuse, so that a job feels like a stance rather than a task

Which of these dominates is a dasha question, not a natal one. See section 13.

THE LAGNA'S NAKSHATRA CHAIN

Hasta's lord is the Moon. The Moon is in the 6th, in Shatabhisha, whose lord is Rahu. Rahu is in Hasta, in the 1st. This closes: **Lagna → Moon → Rahu → back to Hasta**. The nakshatra governing the rising degree is ruled by a graha whose own nakshatra is ruled by the graha sitting on that rising degree. Section 5 takes this apart properly, because it is the single most unusual structure in the chart.

03 The Moon in depth

Traced through every layer, because in Jyotish the Moon is the chart's working mind and the anchor of the dasha system.

LAYER	VALUE	CONDITION OF THAT LAYER
Rashi	Aquarius 15°09'20"	neutral sign, no dignity either way
Bhava	6th (whole sign)	dusthana – holds in the 6th under Sripati too
Janma nakshatra	Shatabhisha, pada 3	lord Rahu
Navamsa	Aquarius	VARGOTTAMA
Rashi lord	Saturn	7th bhava, dig bala 56.6/60, exalted in D9
Nakshatra lord	Rahu	1st bhava, 2°03' from the Lagna degree
Paksha	Krishna, tithi 22 (Saptami)	57.4% illuminated, waning
Drishti received	none	no graha aspects the Moon
Drishti cast	12th bhava	–
Conjunctions	none	alone in Aquarius
Avastha	Yuva (adult)	baladi, by degree

The chain, traced

Moon → Aquarius → Saturn. The Moon's sign lord is Saturn, which sits in the 7th bhava in Pisces. Saturn there has 56.6 of a possible 60 virupas of *dig bala*, close to the maximum any graha can hold, because the 7th is Saturn's direction of strength. Saturn is also in its own nakshatra, Uttara Bhadrapada, and rises to exaltation in the navamsa. So the Moon's dispositor is one of the best-supported bodies in the chart, and it is supported by measures that have nothing to do with rashi dignity.

Moon → Shatabhisha → Rahu. The nakshatra lord is Rahu, which sits two degrees from the Lagna in Hasta — and Hasta's lord is the Moon. This is a *nakshatra parivartana*, a mutual exchange at the nakshatra level: the Moon occupies Rahu's asterism while Rahu occupies the Moon's. There is no rashi-level exchange anywhere in this chart. There are two at nakshatra level, and this is one of them.

Pada and navamsa. Shatabhisha pada 3 places the Moon in the Aquarius navamsa, the same sign it occupies in the rashi chart. The Moon is *vargottama*. In classical terms this is a real strength: what the Moon is in the birth chart, it remains in the ninth harmonic, without dilution.

Where the layers reinforce, and where they contradict

REINFORCING

Vargottama status, a dispositor with near-maximal directional strength, a nakshatra lord sitting on the Lagna, and a *Sunapha yoga* (Saturn in the 2nd from the Moon, which also rules out *Kemadruma*, the isolated-Moon affliction). Four independent supports.

CONTRADICTING

The 6th bhava is a *dusthana*. The Moon receives *no graha drishti at all* — nothing aspects it. It has no conjunction. It is waning, at 57.4% lit, which places it barely inside the window classical texts call a strong Moon and on the declining side of it. And its nakshatra lord is Rahu, a graha with no sign dignity of its own.

TECHNICAL FACT

A vargottama Moon, unaspected and unconjunct, in a dusthana under both bhava conventions, in mutual nakshatra exchange with Rahu, disposed by a Saturn that is directionally the strongest body in the chart.

CLASSICAL DELINEATION

An unaspected Moon has no delineation I can source. An earlier version of this document opened this paragraph with “Parashara treats an unaspected Moon as self-referring.” That attribution was invented. Section 17 then compounded the error by describing the phrasing as belonging to “an earlier version” while it was still present here. Both are corrected now, and the sequence is recorded rather than quietly repaired.

Provenance: inferred, mine. Within the declared framework the defensible statement is that no graha reaches the Moon by drishti, so its modification comes from its dispositors rather than from other bodies. Vargottama sustains whatever it is across the harmonic. A 6th-house Moon is associated in standard practice with service, health, contention and daily labour, the 6th being *shatru bhava*. An earlier version of this document treated the house as ambiguous between the 6th and the 5th; that was an artefact of the bhava error corrected in section 1, and the Moon holds in the 6th under both conventions.

POSSIBLE LIVED EXPRESSIONS

- Emotional processing that is comparatively little modified by the rest of the chart, since under the declared drishti system no graha aspects the Moon. What that feels like from the inside is not something the configuration establishes
- A steady rather than volatile temperament, from vargottama, with the steadiness coming from Saturn’s structure rather than from ease
- A pull toward being useful, toward work with a service or problem-solving shape
- Some dependence on Rahu-flavoured novelty, unconventional interests or outsider positions for emotional interest, given the Moon-Rahu exchange

None of these is established by the configuration; they are extrapolations from it. The Moon’s own mahadasha does not arrive until 2087, so no period evidence bears on them within a normal lifetime.

04 Graha by graha

Sun

Technical. 23°29'59" Taurus, 9th bhava, Mrigashira pada 1, nakshatra lord Mars. Taurus is Venus's sign and Venus is the Sun's natural enemy, so the Sun sits in an enemy's rashi. Direct. Navamsa Leo — own sign, a clear gain. Dig bala 49.5/60. Baladi avastha Kumara. Functional lord of the 12th. Conjunct Mars, Mercury and Venus; aspected only by Saturn's 3rd-house drishti; casts on the 3rd.

Classical. The text declines to class the Sun for Virgo, saying its "role will depend on his association" (ch. 34 vv. 31–32). An earlier version of this reading called it a functional malefic on 12th lordship; that was inference, not doctrine. Its associations here are Mars, Mercury and Venus, and it is placed in the 9th — the house of father, dharma and fortune — in the company of the chart's two most dignified benefics. A 12th lord in a trikona is classically read as expenditure and dissolution being channelled into the 9th's matters, which the tradition treats more kindly than a 12th lord elsewhere. Its own-sign navamsa means the Sun's weakness is a rashi-level appearance that does not persist into D9.

Possible expressions. Ambivalence toward authority figures without hostility to them; a sense of self that does not announce itself; the possibility that time, money or energy goes abroad, into study, or into things that do not return directly; a father or father-figure connected to belief, distance or education. All of these are contingent; none is required.

Mercury

Technical. 0°16'53" Taurus — the very first degree of the sign — 9th bhava, Krittika pada 2, nakshatra lord Sun. Friend's sign. Direct, 23°13' from the Sun, *not* combust. Navamsa Capricorn. Dig bala 12.7/60, the second lowest in the chart. Baladi avastha Mrita. Lord of the 1st and the 10th. Conjunct Sun, Mars, Venus; aspected by Saturn.

Classical. Lagna lord and 10th lord in one body, placed in the 9th with the 9th lord: this is the raja yoga engine of the chart, treated in section 9. But two counterweights were placed on the record, and the first of them does not survive audit.

RASHI SANDHI: THRESHOLD NOT ESTABLISHED, ATTRIBUTION WITHDRAWN

An earlier version said Mercury at 0°16′ sits at “a *sandhi* degree at the junction of signs, which classical texts read as a *graha* not fully established in its *rashi*.” **No classical passage stating a degree threshold was reached**, and the attribution to “classical texts” is withdrawn.

Two secondary sources give incompatible thresholds, and Mercury falls on opposite sides of them:

- A band of **0°00′–0°20′** (stated as 29°40′ of the preceding *rashi* to 0°20′ of the following). Mercury at 0°16′53″ is **inside by 3′07″**.
- A worked example placing a *graha* “at *rashi sandhi*” at **0°05′**, with no band stated. On that scale Mercury is **outside by 11′53″**.

Neither source cites a text for the number. The claim therefore flips on a choice between two unsourced conventions, and this document declines to make it. **No verdict on Mercury and *rashi sandhi* is given.**

Scope of that finding. What is withdrawn is this document's attribution and its numerical implementation. This is not a claim that no such doctrine exists — only that *no classical passage supporting the specific threshold used here was located*. A textual source may surface later without making the withdrawal wrong.

What does have a named attribution does not apply. *Gandanta*, the severe form of *rashi sandhi*, is attributed to Parashara (secondary) at three junctions only — Pisces–Aries, Cancer–Leo, Scorpio–Sagittarius, the water-to-fire joins. **Aries–Taurus is not among them**, so *gandanta* is inapplicable to Mercury irrespective of degree.

The counterweight that stands is the second: Mercury's *baladi avastha* is *Mrita*, the weakest of the five. That does not cancel a yoga; it tempers the ease with which it operates. The geometric fact also stands on its own — Mercury is 17 arcminutes into Taurus, the first *graha* by degree in the sign — whatever weight a reader gives it.

Possible expressions. Intelligence directed at meaning rather than mechanics; a working life shaped around what one believes about a field; skill in language, analysis or systems used in service of a larger orientation; a slow start in establishing professional footing relative to the underlying capacity. The gap between capacity and establishment is a *dasha* matter.

Venus

TECHNICAL FACT

28°01'11" Taurus, 9th bhava, Mrigashira pada 2, nakshatra lord Mars. OWN SIGN. Retrograde — which Shadbala counts as a source of *cheshta bala*, i.e. as STRENGTH, not weakness. Against that: combust at 4°32' from the Sun against a retrograde orb of 8°; dig bala 9.0/60, the lowest of any graha here; DEBILITATED in the navamsa, falling to Virgo; and baladi avastha Bala, a minor modifier. Own sign again in D7 (vargottama) and in D10. Lord of the 9th and the 2nd.

CLASSICAL DELINEATION

This is the most important nuance in the chart and it cuts against the obvious reading. Venus holds the single best rashi dignity available — its own sign, as lord of the best trikona, in that trikona. By rashi alone it is the chart's strongest body. Three further measures cut against it: *asta* (combust), minimal *dig bala*, and *neecha* in D9, with infant avastha a minor fourth. **Retrogression is not among them.** Shadbala treats a retrograde graha as gaining *cheshta bala*; reading retrogression as weakening is a modern convention this document does not use. Nor is the picture uniform across the vargas: Venus returns to its own sign in D10 and to own sign plus vargottama in D7. Parashari method does not let rashi dignity overrule the rest, but it equally does not let one varga stand for all of them.

POSSIBLE LIVED EXPRESSIONS

- Real aesthetic capacity and real taste, which nonetheless may not feel reliably available or self-evident from the inside
- Value, beauty and relationship mattering enormously as themes while being complicated in operation
- Fortune arriving through periods rather than as a standing condition — and note that the current antardasha is Venus's, running to December 2028
- A gap between how much beauty matters to her and how much she experiences herself as having it
- Strength that shows up in some contexts and not others, since the vargas genuinely disagree: weak in the ninth-harmonic reading of the chart, strong in the career and progeny vargas

None of this says the capacity is absent. It says the chart makes its availability conditional, and section 13 is where the conditions live.

Mars

Technical. 2°44'51" Taurus, 9th bhava, Kritika pada 2, nakshatra lord Sun. Neutral sign. Direct. Not combust (20°45'). Navamsa Capricorn — **exalted**, a substantial gain. Dig bala 42.6/60. Baladi avastha Mrita. Functional lord of the 3rd and the 8th, both difficult houses for this Lagna, making Mars the clearest functional malefic here. Casts special drishti on the 4th (onto Jupiter) and the 12th, plus the 7th aspect on the 3rd.

Classical. A functional malefic sitting in the best trikona is a mixed signature: the 8th lord in the 9th is a classical difficulty (the 12th from the 9th, dissolving fortune) while placement in a trikona among benefics moderates it. Mars in Mrita avastha at rashi level but exalted in navamsa is the mirror image of Venus: weak in the visible chart, strong underneath.

Possible expressions. Drive that attaches to belief or to a field rather than to competition; a capacity for sustained effort that is more available in practice than it appears on paper; friction around inheritance, shared resources, or the fortunes of the father; energy that shows up under pressure rather than on demand.

Jupiter

Technical. 22°05'33" Sagittarius, 4th bhava, Purva Ashadha pada 3, nakshatra lord Venus. OWN SIGN. Retrograde. Navamsa Libra — own-sign status is *not* retained. Dig bala 30.1/60. Baladi avastha Vriddha (old). Functional lord of the 4th and the 7th, both kendras. Receives Mars's 8th-house drishti and Saturn's 10th-house drishti. Casts on the 8th, 10th and 12th.

KENDRADHIPATI DOSHA

Two mechanisms, and they are separate. The general rule (BPHS ch. 34 vv. 2–7) is muting rather than reversal: *"Benefics owning Kendras will not give benefic effects, while malefics owning Kendras will not remain inauspicious."* A benefic loses beneficence; it does not thereby become a malefic.

Separately, the 7th is a *maraka* house, which is a distinct liability rather than the same one restated.

But for this lagna the text goes further. Ch. 34 vv. 31–32 names Guru a malefic for Kanya outright. So the label is not an over-reading of kendrahipati dosha, as an earlier audit of this document supposed; it is stated. Both hold at once — the general mechanism mutes, the per-lagna list classes. The chart's single Mahapurusha yoga is formed by a graha the text calls a malefic for this ascendant. Own-sign placement mitigates; it does not remove.

Possible expressions. A strong attachment to home, land or domestic ground as a source of meaning; wisdom that arrives through the domestic and the private rather than the public; the possibility that expansion in one area of life reliably costs something in another, given the same graha rules both home and partnership. Jupiter's mahadasha ran 2002 to 2018 — childhood through age twenty-two — so much of its work is already historical rather than pending.

Saturn

TECHNICAL FACT

12°12'27" Pisces, 7th bhava, Uttara Bhadrapada pada 3 – *its own nakshatra*. Neutral sign, no rashi dignity. Direct. Dig bala 56.6/60, the highest in the chart. Navamsa Libra – **exalted**. Vargottama in D10. Lord of the 5th (trikona) and the 6th (dusthana). Conjunct Ketu. Aspects the 1st, the 4th and the 9th – that is, the Lagna, Jupiter, and all four grahas in the ninth. Currently running its mahadasha, 2018 to 2037.

CLASSICAL DELINEATION

Saturn is the quiet structural centre of this chart, and nothing about its rashi says so. It holds no sign dignity at all, yet it has near-maximal directional strength, sits in its own nakshatra, exalts in the navamsa, is vargottama in the career varga, aspects more of the chart than any other graha, and rules a trikona. As 5th lord it carries the chart's intelligence and creative signification; as 6th lord it carries service, health and difficulty. Saturn in the 7th is classically read as delay and weight in partnership, but also as durability once established, and dig bala there is a genuine strength rather than a consolation.

POSSIBLE LIVED EXPRESSIONS

- Partnership arriving with structure, seriousness or an age or responsibility differential, and lasting
- Creative and intellectual output that is disciplined rather than spontaneous, and improves with time
- A long working relationship with limits, health, or service as recurring themes
- Authority accumulating slowly and then holding

Because Saturn's mahadasha runs to December 2037, these are live conditions now rather than background ones. Section 13 breaks the sub-periods down.

05 The nakshatra network

Four grahas share one rashi in this chart. They do not share one nakshatra, and treating them as a single cluster would erase the most interesting structure present.

The Taurus stellium is not one thing

NAKSHATRA	SPAN	GRAHAS	PADA	NAKSHATRA LORD
Krittika	26°40' Ari – 10°00' Tau	Mercury, Mars	both pada 2	Sun
Mrigashira	23°20' Tau – 6°40' Gem	Sun, Venus	1 and 2	Mars

The four bodies in the ninth split cleanly into two pairs, and the pairs are separated by more than twenty degrees of arc. Mercury and Mars sit together at the sign's opening, both in Krittika pada 2, ruled by the Sun. The Sun and Venus sit together at its close, in Mrigashira, ruled by Mars. Whatever this stellium does, it does through two distinct channels rather than one.

THE EXCHANGE

The Sun is in Mars's nakshatra. Mars is in the Sun's nakshatra. This is a **nakshatra parivartana** between the two, and it means the pair that governs the ninth-house group governs it reciprocally: neither is upstream of the other. The Sun channels Mercury and Mars; Mars channels the Sun and Venus; and the Sun and Mars channel each other.

Who controls how much of the chart

NAKSHATRA LORD	PLACEMENTS IT GOVERNS	COUNT
Sun	Mars, Mercury	2
Mars	Sun, Venus	2
Rahu	Moon	1
Moon	Rahu	1
Venus	Jupiter	1
Mercury	Ketu	1
Saturn	Saturn	1 (its own)

No single graha dominates the chart through nakshatra rulership. Control is distributed, and it is distributed in a specific pattern: **two closed mutual pairs** (Sun–Mars, Moon–Rahu), **one self-referring graha** (Saturn, in its own nakshatra), and two open links (Venus→Jupiter, Mercury→Ketu).

Chains, followed to termination

GRAHA	NAKSHATRA CHAIN	TERMINATES
Sun	Sun → Mars → Sun	closed loop
Mars	Mars → Sun → Mars	closed loop
Moon	Moon → Rahu → Moon	closed loop
Rahu	Rahu → Moon → Rahu	closed loop
Saturn	Saturn → Saturn	self
Mercury	Mercury → Sun → Mars → Sun	feeds the Sun–Mars loop
Venus	Venus → Mars → Sun → Mars	feeds the Sun–Mars loop
Jupiter	Jupiter → Venus → Mars → Sun	feeds the Sun–Mars loop
Ketu	Ketu → Mercury → Sun → Mars	feeds the Sun–Mars loop

TECHNICAL FACT

Six of nine grahas resolve into or through the Sun–Mars cycle: Sun, Mars, Mercury, Jupiter, Venus and Ketu. (An earlier version said seven. Enumerating the members rather than trusting the total gives six.) The remaining three do not touch it – the Moon and Rahu form a sealed pair, and Saturn resolves only to itself. The chart divides six, two and one.

CLASSICAL DELINEATION

Nakshatra lordship is the layer Vimshottari runs on, so these chains describe how periods will actually deliver. A chart whose nakshatra network converges on a Sun–Mars pair is described as operating through initiative, heat, visibility and assertion — the two most *kshatriya* grahas — regardless of how the rashi chart looks. That the emotional apparatus (Moon) sits outside that convergence, in a sealed pair with Rahu, is a genuine structural separation and not a minor detail.

POSSIBLE LIVED EXPRESSIONS

- A public or working self that runs hotter and more directly than the emotional self does
- An inner life that answers to different logic than the outer one, and does not translate easily into it
- Interests, tastes or emotional attachments that feel unaccountable to the rest of the personality
- Saturn’s self-reference suggesting a domain — discipline, structure, partnership, service — that answers to nothing but itself

06 The twelve bhavas

BHAVA	RASHI	LORD	LORD PLACED	LORD’S DIGNITY	LORD’S NAKSHATRA	OCCUPANTS
1	Virgo	Mercury	9th, Taurus	friend’s sign	Krittika 2	Rahu
2	Libra	Venus	9th, Taurus	own sign	Mrigashira 2	–
3	Scorpio	Mars	9th, Taurus	neutral	Krittika 2	–
4	Sagittarius	Jupiter	4th, Sagittarius	own sign	P. Ashadha 3	Jupiter
5	Capricorn	Saturn	7th, Pisces	neutral	U. Bhadrpada 3	–
6	Aquarius	Saturn	7th, Pisces	neutral	U. Bhadrpada 3	Moon
7	Pisces	Jupiter	4th, Sagittarius	own sign	P. Ashadha 3	Saturn, Ketu
8	Aries	Mars	9th, Taurus	neutral	Krittika 2	–
9	Taurus	Venus	9th, Taurus	own sign	Mrigashira 2	Sun, Mars, Mercury, Venus
10	Gemini	Mercury	9th, Taurus	friend’s sign	Krittika 2	–
11	Cancer	Moon	6th, Aquarius	neutral	Shatabhisha 3	–
12	Leo	Sun	9th, Taurus	enemy’s sign	Mrigashira 2	–

THE EIGHT BHAVAS FLAGGED FOR ATTENTION

1st. Virgo, lord Mercury in the 9th, Rahu occupying. The self is described elsewhere in the chart and marked here by a node. Section 14.

2nd. Libra, lord Venus in own sign in the 9th. Wealth and speech ruled by the chart's most dignified body — but that body is combust and debilitated in D9, so the 2nd's support is strong on paper and conditional in practice. An earlier version named the D2 Hora chart as the appropriate cross-check here. With its wealth reading withdrawn (§12), the D2 no longer supports that role, and the 2nd house is left to be read from its lord and occupants alone.

4th. Sagittarius, lord Jupiter *in* the 4th, in own sign. The strongest house-lord placement in the chart by ordinary reckoning: a kendra lord in its own kendra, forming Hamsa yoga. Qualified by kendradhipati dosha and retrogression.

5th. Capricorn, lord Saturn in the 7th with dig bala. Intelligence, creativity and children ruled by the chart's most directionally powerful graha, but one placed in the partnership house and joined to Ketu.

7th. Pisces, lord Jupiter in the 4th in own sign; occupied by Saturn (with maximal dig bala) and Ketu. The 7th is unusually loaded: a well-placed lord, a dignified-by-direction malefic, and a node. Section 15 handles this carefully.

9th. Taurus, lord Venus in it, in own sign, with three other grahas. The most populated house in the chart and the seat of both major yogas.

10th. Gemini, lord Mercury in the 9th with the 9th lord. This conjunction is the Dharma-Karmadhipati yoga. No occupants, but Jupiter aspects the 10th from the 4th.

11th. Cancer, lord Moon in the 6th, unaspected. Gains, networks and friendships ruled by the least connected body in the chart.

07 Functional roles for this Lagna

Determined from Virgo rising, not from any graha's natural character. The result contradicts the natural reading in two places, and those two places matter.

GRAHA	RULES	NATURE OF THOSE HOUSES	FUNCTIONAL VERDICT
Mercury	1, 10	kendra + trikona; kendra	strongest functional benefic
Venus	9, 2	best trikona; maraka	functional benefic, with maraka duty
Saturn	5, 6	trikona; dusthana	not named for this lagna in the text – verdict below is <i>inferred</i>
Moon	11	upachaya	MALEFIC – stated in the text
Jupiter	4, 7	kendra; kendra + maraka	functional malefic by kendradhipati dosha
Mars	3, 8	upachaya; dusthana	functional malefic
Sun	12	dusthana	"role will depend on his association" – not classed either way

CORRECTION: THREE VERDICTS CHECKED AGAINST THE TEXT

An earlier version of this table was written from general lordship logic. Checked against *Brihat Parashara Hora Shastra*, sanskritdocuments English translation (edition unidentified), ch. 34 vv. 31-32, on Kanya lagna — **textual stability: low**, since a second translation of the same verse strengthens one clause materially — the passage reads:

“Mangal, Guru, and Chandr are malefics, while Buddh and Shukr are auspicious. Shukr’s yuti with Buddh will produce Yog. Shukr is a killer as well. Surya’s role will depend on his association.”

Three verdicts were wrong. **The Moon** was called mixed; the text calls it a malefic. **The Sun** was called a functional malefic on 12th lordship; the text declines to class it and makes it depend on association. **Saturn** is not mentioned for this lagna at all, so “mixed, tilting benefic” was my inference presented as doctrine, and is relabelled.

Mars, Jupiter, Mercury and Venus are confirmed as they stood — including Venus as both auspicious and a killer, which the reading had already caught.

A CORRECTION TO A COMMON SOFTWARE OUTPUT

Mercury also rules only kendras here (the 1st and the 10th), which some programs flag for kendrahipati dosha. Classical doctrine exempts the Lagna lord: the 1st is simultaneously a kendra and a trikona, and lordship of the Lagna is held to override the dosha. Mercury is a functional benefic without qualification. Jupiter, ruling the 4th and 7th and nothing else, is not exempt.

TECHNICAL FACT

The chart's two own-sign grahas are Venus and Jupiter. Venus is a functional benefic that also carries maraka lordship of the 2nd. Jupiter, the greater natural benefic, is a functional malefic for Virgo Lagna. Saturn, the greater natural malefic, rules a trikona – but the text does not class Saturn for this lagna, so any verdict on it here is *inferred*, not sourced.

CLASSICAL DELINEATION

BPJS ch. 34 does not derive per-lagna verdicts from lordship logic and leave the reader to infer them — it lists them. For Kanya it names Mars, Jupiter and the Moon malefic, Mercury and Venus auspicious, Venus additionally a killer, and the Sun dependent on association. Saturn it does not mention. So the reversal of Jupiter's natural reputation is **stated** for this lagna rather than inferred from kendradhipati dosha, while any parallel claim about Saturn being broadly supportive is **inference** and is marked as such throughout.

POSSIBLE LIVED EXPRESSIONS

- Discipline, limitation and structure functioning as sources of benefit rather than obstruction
- Expansion, optimism and abundance carrying costs that are not obvious in advance
- The house of home and the house of partnership sharing one ruler, so that the two areas move together whether or not that is convenient
- Periods of Saturn reading better in life than they read on paper — and Saturn's mahadasha is running now

08 Relationships and drishti

Graha drishti, sign-based

GRAHA	CASTS UPON	RECEIVES FROM
Saturn	1st, 4th, 9th	nothing
Jupiter	8th, 10th, 12th	Mars (8th), Saturn (10th)
Mars	3rd, 4th, 12th	Saturn (3rd)
Sun	3rd	Saturn (3rd)
Mercury	3rd	Saturn (3rd)
Venus	3rd	Saturn (3rd)
Moon	12th	nothing
Rahu	casts none — see below	Saturn (7th)
Ketu	casts none — see below	nothing

CORRECTION: THE NODES CAST NO DRISHTI HERE

An earlier version of this table gave Rahu and Ketu a 7th-house aspect each. **No primary source supports it.** *Brihat Parashara Hora Shastra*, sanskritdocuments English translation (edition unidentified), ch. 34 vv. 16–17. **Textual stability: not tested** — only one translation consulted. The passage gives the nodes their effects “as due to their yuti with a bhava lord or as due to the bhava they occupy” — conjunction and occupation, no drishti.

The 5/7/9 node-aspect doctrine is reported (**secondary**, jyotishvidya.com) to derive from the **Khemraj 1932** edition of BPHS and to differ from **Santhanam 1984**. Ketu is separately argued to cast no graha drishti at all, being headless. Under a declared Parashari framework the cast aspects come out; the nodes still *receive*.

Consequence: Saturn and Ketu now receive no drishti at all, joining the Moon. Three of nine bodies are unaspected.

Saturn casts widely and receives nothing. Its three drishtis land on the Lagna, on Jupiter in the 4th, and on all four grahas in the 9th — **six** of the other eight bodies. (An earlier version said seven; that was an arithmetic error, independent of the node question.) The two it misses are the Moon and Ketu. And with the node aspects removed, nothing aspects Saturn in return.

Jupiter is doubly aspected by malefics. Mars’s 8th-house special drishti and Saturn’s 10th-house special drishti both land on Jupiter in the 4th. The chart’s only Mahapurusha yoga sits under both malefic aspects simultaneously. Jupiter in turn aspects the 10th, which is the sole graha drishti reaching the career house.

Compound relationships (natural plus temporal)

GRAHA	GREAT FRIENDS	GREAT ENEMIES
Sun	Moon	Venus
Moon	Sun, Mercury	none
Mars	Moon	Mercury
Mercury	none	none
Jupiter	Moon	Mercury, Venus
Venus	Saturn	Sun
Saturn	Mercury, Venus	none

Two things stand out. **Venus and the Sun are compound great enemies while sharing a rashi** — and the Sun combusts Venus. **Saturn is a great friend to both Mercury and Venus**, the two functional benefics, and has no compound enemies at all. Saturn aspecting the ninth-house group is therefore an aspect between friends, not an affliction.

Dispositor chains

CHAIN	TERMINATES IN
Sun → Venus	Venus, own sign

Mars → Venus	Venus, own sign
Mercury → Venus	Venus, own sign
Rahu → Mercury → Venus	Venus, own sign
Moon → Saturn → Jupiter	Jupiter, own sign
Saturn → Jupiter	Jupiter, own sign
Ketu → Jupiter	Jupiter, own sign

Every chain terminates, and there are exactly two terminals. Venus governs the Sun, Mars, Mercury, Rahu and itself — five bodies. Jupiter governs the Moon, Saturn, Ketu and itself — four. No loops, no unresolved chains. The chart has two governing authorities and they divide it almost evenly.

Note which side the Moon falls on: not Venus's. The emotional apparatus reports to Jupiter through Saturn, while the ninth-house group reports to Venus. The same split that appeared in the nakshatra network appears again at rashi level, drawn along the same line.

09 Yogas actually present

Each rule is stated first, then tested. Combinations that do not form are listed too, because a yoga's absence is information and its false presence is the commonest failure in software readings.

TIERS, DEFINED BEFORE USE

Principal structural yogas: Hamsa, Dharma-Karmadhipati, Lakshmi. **Supporting lunar yoga:** Sunapha. **Explicitly absent or cancelled:** Kemadruma, Malavya, Shasha, Ruchaka, Bhadra, Gaja Kesari, Sakata, Vipareeta Raja, and rashi parivartana.

Four yogas form in total. Where this document says “the three principal yogas” it means the first tier, and Sunapha is counted separately rather than silently dropped.

Hamsa Yoga — forms

Rule. One of the five *Pancha Mahapurusha* yogas: Jupiter in its own sign or exaltation, occupying a kendra from the Lagna.

Test. Jupiter in Sagittarius, its own sign, in the 4th bhava, a kendra. **Forms.**

Modification. Three qualifications, all on the record. Jupiter is retrograde. Jupiter carries kendradhipati dosha for Virgo Lagna. Jupiter receives the special drishti of both Mars and Saturn. And Jupiter does not retain own-sign status in the navamsa, falling to Libra. The yoga forms and is real; it is not unqualified.

Dharma-Karmadhipati Yoga — forms

Rule, general. Association of the 9th lord (*dharma*) with the 10th lord (*karma*). Among the strongest raja yogas in standard practice.

Rule, specific to this lagna, and better grounded. *Brihat Parashara Hora Shastra*, sanskritdocuments English translation (edition unidentified), ch. 34 vv. 31–32. **Textual stability: low** — a second translation renders the same verse “Mercury and Venus become Yogakaraka,” a materially stronger claim. The passage names this exact pair for Kanya: “*Shukr’s yuti with Buddh will produce Yog.*” Venus with Mercury, for Virgo rising, is stated in the text as yoga-producing. That is a direct textual basis rather than an application of the generic kendra-trikona rule, and it is what this yoga now rests on.

Test. 9th lord Venus and 10th lord Mercury are conjunct in Taurus in the 9th bhava. Venus is in its own sign there. **Forms, by conjunction, in the 9th lord’s own house.**

Modification. Venus is combust and debilitated in D9; Mercury is in Mrita avastha — and this is the one use of baladi in this document that sources positively support, since avasthas are described as modifying *the effectiveness of yogas* specifically (**secondary / standard practice**; no primary passage reached). (An earlier version also counted Mercury as being in rashi *sandhi*. That is withdrawn — see §4: no sourced threshold exists and Mercury falls inside one secondary convention and outside another.) The yoga is structurally excellent and its participants are individually compromised. Classical practice reads this as a yoga that delivers in its periods rather than continuously.

Lakshmi Yoga — forms

Rule, sourced. *Phaladeepika* of Mantreswara, **ch. 6 v. 21**, wisdomlib text-and-translation edition.

Textual stability: not tested — one translation consulted, no second rendering compared. **Passage-number stability: low** — an earlier version of this document cited v. 28, which is wrong; v. 28 defines Srikantha, Srinatha and Virinchi. Automated reads of this page returned the verse number inconsistently, so the number is reported on the strength of a human check rather than my own.

“If the lord of the 9th and Venus be posited in their own or exaltation houses identical with a Trikona or a Kendra, the resulting Yoga is Lakshmi.”

CORRECTION: THE RULE THIS DOCUMENT USED WAS WRONG TWICE

An earlier version stated the rule as *“the 9th lord in its own sign or exaltation, in a kendra or trikona, with a strong Lagna lord.”* It **omitted the condition on Venus**, and it **added a Lagna-lord condition that verse 21 does not contain**. The document then reported the yoga as forming “with one condition partially met” — a qualification manufactured out of a requirement that is not in the source. Both the rule and that false qualification are withdrawn.

Test, against verse 21 as written.

- **Lord of the 9th, in own or exaltation, in trikona or kendra.** The 9th from Virgo is Taurus, so the 9th lord is Venus. Venus is at 28°01' Taurus — own sign — in the 9th bhava, a trikona. **Satisfied.**
- **Venus, in own or exaltation, in trikona or kendra.** Same placement. **Satisfied.**

Outcome: forms under the ordinary reading of v. 21. Both stated conditions are met and the yoga retains principal status. Stated that way rather than as flat confirmation, because the reading depends on accepting that one graha can satisfy both named roles — see immediately below.

QUALIFICATION THAT TRAVELS WITH THE CLAIM

For Virgo lagna **the 9th lord is Venus**, so verse 21's two named roles collapse into a single graha and one placement does double duty. Enumerating all twelve lagnas, this happens for exactly two: **Virgo and Aquarius**, the only ones whose 9th sign is Taurus or Libra. For the other ten, the yoga requires two distinct grahas to be simultaneously dignified.

What that establishes is narrow and should not be overstated: the yoga here **requires only one distinct graha to be dignified rather than two**. That is a statement about how many bodies the condition needs, not about the yoga being weaker or easier in effect. **Provenance of the one-graha reading: secondary.** Later and practical Jyotish sources recognise this single-planet form for Virgo and Aquarius ascendants, but v. 21 itself names “the lord of the 9th and Venus” without separately discussing the case where the two roles are the same graha. The qualification belongs in every restatement.

What verse 21 does not require. It is silent on combustion, retrogression and affliction. So Venus being combust at 4°32' and debilitated in the navamsa does *not* block formation. Those facts remain true of the graha carrying the yoga and travel with it, but they are not disqualifying under the rule as stated.

Sunapha Yoga — forms (supporting, not principal)

Rule. A graha other than the Sun in the 2nd from the Moon.

Test. Saturn in Pisces, the 2nd from the Moon in Aquarius. **Forms.** No graha occupies the 12th from the Moon, so Anapha does not form and Durudhara does not form.

Kemadruma — does not form

Rule. The affliction of the isolated Moon: no graha in the 2nd or 12th from it. **Test.** Saturn occupies the 2nd. **Cancelled.** This matters given how isolated the Moon otherwise is.

Combinations that do not form

YOGA	REQUIREMENT	WHY NOT
Malavya	Venus own/exalted in a kendra	Venus is own sign but in the 9th, a trikona, not a kendra
Shasha	Saturn own/exalted in a kendra	Saturn is in a kendra but Pisces is neither own nor exaltation
Ruchaka	Mars own/exalted in a kendra	neither condition met
Bhadra	Mercury own/exalted in a kendra	neither condition met
Gaja Kesari	Jupiter in a kendra from the Moon	Jupiter is in the 11th from the Moon
Sakata	Moon in 6/8/12 from Jupiter	Moon is in the 3rd from Jupiter
Vipareeta Raja	a 6/8/12 lord in another of 6/8/12	Saturn to the 7th, Mars to the 9th, Sun to the 9th – none qualify
Neecha Bhanga	cancellation of a debility	no graha is debilitated in the rashi chart
Budha-Aditya	Sun and Mercury conjunct	same rashi but 23°13' apart, in different nakshatras – nominal only
Rashi parivartana	mutual exchange of signs	none anywhere in the chart

Malavya is the near miss worth naming: Venus needed to be in a kendra and is three houses off. Had the Lagna been Scorpio or Aquarius rather than Virgo, the same Venus would have produced a Mahapurusha yoga.

10 Strength, and its limits

WHAT IS NOT COMPUTED HERE, AND WHY

Full *Shadbala* requires Sthana, Dig, Kala, Cheshta, Naisargika and Drik bala. Several of those — Cheshta bala in particular — have competing formulations across authorities, and the aggregate thresholds by which a graha is called strong or weak differ between schools. Producing a single number would mean picking one formulation and presenting it as settled. **Shadbala is therefore not given.**

Ishta and *Kashta phala* derive from Shadbala components and are likewise omitted rather than approximated.

One Shadbala component with a single unambiguous formula *is* computed exactly: **Dig bala**. **Baladi avastha** is also computed, but it is not a Shadbala component and is not commensurable with dig bala — see the correction below.

Dig bala, computed

GRAHA	VIRUPAS / 60	DIRECTION OF STRENGTH	READING
Saturn	56.6	7th (west)	near maximal
Sun	49.5	10th (south)	strong
Moon	43.2	4th (north)	moderate
Mars	42.6	10th (south)	moderate
Jupiter	30.1	1st (east)	middling
Mercury	12.7	1st (east)	weak
Venus	9.0	4th (north)	weakest in the chart

TECHNICAL FACT

The two grahas with the best rashi dignity (Venus, own sign; Jupiter, own sign) rank last and fifth on directional strength. The graha with no rashi dignity at all (Saturn) ranks first, at 56.6 of 60. Mercury, the Lagna lord, ranks sixth.

CLASSICAL DELINEATION

Parashari method treats these as independent axes that must both be weighed; neither overrules the other. A graha strong in *sthana* and weak in *dig* is classically read as having capacity without natural placement for exercising it — it holds the quality but not the position. The reverse, Saturn's case, is a graha positioned to act without inherent quality to draw on: effective by location rather than by nature.

POSSIBLE LIVED EXPRESSIONS

- Real talent in Venus's domains that does not automatically convert into position, recognition or felt possession
- Effectiveness in Saturn's domains — structure, endurance, partnership, service — that exceeds any felt enthusiasm for them
- A recurring gap between what is possessed and what is deployed

Baladi avastha

GRAHA	DEGREE IN RASHI	AVASTHA
Venus	28°02′	Bala – infant
Sun	23°30′	Kumara – youth
Rahu / Ketu	20°13′	(Kumara by the same arithmetic – but no source consulted states that baladi applies to the nodes . Recorded, not relied on.)
Moon	15°09′	Yuva – adult; sources give this as full strength
Saturn	12°12′	Yuva – adult
Jupiter	22°06′	Vridhha – old
Mars	2°45′	Mrita – sources say “gives no result”, tempered by other placement
Mercury	0°17′	Mrita – dead

The Moon and Saturn hold Yuva; Mercury and Mars hold Mrita.

CORRECTION: BALADI IS NOT A SECOND MEASURE OF THE SAME KIND

An earlier version called this “a second, independent measure agreeing with dig bala on the same point.” That is a category error and is withdrawn. Shadbala has six named components — Sthana, Dig, Kala, Cheshta, Naisargika and Drik bala. **Baladi avastha is not among them**; it is a separate scheme, one of several avastha systems, and it does not feed the Shadbala total.

What sources describe avasthas as doing is narrower and different: they *temper how effectively a graha’s strength manifests*, and specifically modify the effectiveness of yogas, rather than adding to a strength score. A graha in Mrita avastha that also sits in its own or exaltation sign is described as better placed than one in debilitation — so Mrita does not mean inert.

Provenance: secondary / standard practice. No primary passage was reached. The degree scheme is consistent across the sources consulted; the strength language is not stated in commensurable units anywhere I found.

So dig bala and baladi are not two witnesses to one proposition. The dig bala figures stand on their own; the avasthas are recorded as a separate, weaker qualitative layer.

11 Navamsa, read as a chart

The D9 is the rashi chart’s second body, not merely a marriage indicator. Read on its own terms it substantially rearranges the hierarchy.

GRAHA	D1 RASHI	D1 DIGNITY	D9 RASHI	D9 BHAVA	D9 DIGNITY	DIRECTION
Saturn	Pisces	neutral	Libra	4	EXALTED	major gain
Mars	Taurus	neutral	Capricorn	7	EXALTED	major gain
Sun	Taurus	enemy	Leo	2	own sign	gain
Moon	Aquarius	neutral	Aquarius	8	VARGOTTAMA	holds
Rahu	Virgo	—	Cancer	1	—	on the D9 Lagna
Jupiter	Sagittarius	own sign	Libra	4	neutral	loses own sign
Mercury	Taurus	friend	Capricorn	7	neutral	flat
Venus	Taurus	own sign	Virgo	3	DEBILITATED	major loss

The question this section exists to answer

Does the apparent strength of Venus and Jupiter in the rashi chart persist in the navamsa? **No, in both cases, and to different degrees.**

Venus falls from own sign to debilitation. This is the largest single reversal in the chart. The body carrying the best rashi dignity, ruling the best trikona, and forming two of the three yogas, arrives in the navamsa *neecha*. Combined with combustion and the lowest dig bala in the chart, that is three measures pointing the same way, with infant avastha a minor fourth. But “weak everywhere except sign” would overstate it in two directions. Retrogression does not belong on that list at all: Shadbala assigns retrograde grahas high *cheshta bala*, so classically it counts as strength, and the modern

reading of retrogression as weakening is not used here. And Venus recovers substantially in the topic-specific vargas — own sign in the 11th of D10, own sign and vargottama in D7. The accurate statement is that **Venus is exceptionally strong in D1 sign dignity, materially weakened by several other natal strength indicators and by D9, and strong again in D10 and D7**. Its expression is context-dependent rather than simply weak or strong, which is a more interesting result than either extreme.

Jupiter loses own-sign status, arriving in Libra as a neutral. The Hamsa yoga’s participant is not sustained in the second body. Less severe than Venus, but in the same direction.

Saturn exalts. The graha with no rashi dignity, maximal dig bala, its own nakshatra, and vargottama status in D10 also exalts in the navamsa. Across the non-rashi measures computed in this document, Saturn is the most consistently supported body in the chart.

Mars exalts in Capricorn, and **the Sun gains its own sign**. Both bodies that look mediocre in the rashi chart are substantially better underneath. This pairs with the nakshatra finding: the Sun-Mars cycle that governs six of the nine placements consists of two grahas that are stronger in D9 than D1.

Rahu occupies the D9 Lagna in Cancer, as it occupies the D1 Lagna in Virgo. The node is on the ascending degree of both charts.

7TH LORD IN D9

The D9 Lagna is Cancer, so its 7th is Capricorn, ruled by Saturn — which sits exalted in Libra in the 4th of D9. Capricorn itself holds Mars (exalted), Mercury and Ketu. The navamsa 7th is heavily occupied and its lord is exalted. Read alongside D1, where the 7th holds Saturn with maximal dig bala plus Ketu and is ruled by an own-sign Jupiter, both charts describe a 7th house that is structurally weighty rather than light.

12 Other vargas, where they earn their place

Four charts, each consulted for the single question it answers. Not sixteen.

D10 Dashamsha — career

GRAHA	D10 RASHI	BHAVA	STATUS
Jupiter	Cancer	8	EXALTED
Mars	Capricorn	2	EXALTED
Venus	Libra	11	own sign, house of gains
Sun	Leo	9	own sign
Moon	Cancer	8	own sign
Saturn	Pisces	4	VARGOTTAMA
Mercury	Capricorn	2	neutral

The career varga is the strongest divisional chart in this set by some distance: five grahas in own sign or exaltation, and Saturn vargottama. Venus, weak nearly everywhere else, holds its own sign in the 11th of D10, the house of gains. This is a real and specific finding, and it is worth noting that it sits against Venus's weakness elsewhere rather than confirming it.

D4 Chaturthamsha — home and property

Lagna Pisces, with Rahu on it. Jupiter and Saturn both in Gemini in the 4th of D4 — the home house of the home chart, holding the D1 lord of the 4th and the D1 lord of the 5th and 6th. Mars and Mercury are vargottama in Taurus. The Sun and Venus fall together into the 12th.

Jupiter occupying the 4th in both D1 and D4 is a genuine repetition. Rahu occupying the Lagna in D1, D4 and D9 is a stronger one.

D7 Saptamsha — children

Lagna Leo. Venus is in Taurus in the 10th of D7, in its own sign and **vargottama** — the only varga examined in which Venus is unambiguously strong. The Moon is exalted in the same sign and house, Jupiter joins them, and the Sun is exalted in the 9th. The 4th of D7 holds Mars in own sign, Mercury and Saturn.

Given Venus's condition everywhere else, its vargottama own-sign placement here is a specific, narrow strength rather than a general one, and it is recorded as such.

D2 Hora — wealth

Construction used, and confirmed. Each rashi divides into two halves of 15°. In odd rashis the first half is the Sun's hora (mapped to Leo) and the second the Moon's (mapped to Cancer); in even rashis the order reverses. Secondary sources report the classics as *unanimous* on this definition — BPHS, Brihat Jataka, Saravali, Phaladeepika and Jataka Parijata. An earlier version of this section hedged that "other hora constructions exist and would give a different chart"; variant schemes do circulate in later practice, but the hedge misrepresented the classical position and is corrected.

The D2 is a table, not a house-chart. It records only which graha went to the Sun's hora and which to the Moon's. This document assigns it no lagna and no houses, which is correct, and that is worth stating rather than leaving implicit.

Placements, recomputed from degrees. Moon's hora: Moon, Mars, Mercury, Jupiter, Saturn. Sun's hora: Sun, Venus. Jupiter is exalted in Cancer and Mars debilitated there, so the Moon's hora holds one graha at its best and one at its worst.

CORRECTION: THE WEALTH READING IS WITHDRAWN, THE CONSTRUCTION STANDS

An earlier version said “*Classical hora doctrine holds that the Sun’s hora favours self-generated wealth and the Moon’s favours received or accumulated wealth. The distribution here tilts toward the Moon’s side.*” Both halves of that fail.

The attribution. The self-generated-versus-received binary is **practitioner convention, tier C**, not classical doctrine. No classical passage stating it was located, and one source consulted explicitly cautions that the texts do not treat the two horas as that kind of binary. “Classical hora doctrine holds” is withdrawn.

The aggregation. Counting grahas per hora and reading the majority is not a method any source consulted endorses, and the one source that sets out an analytical procedure explicitly rejects it — the D2 being a table showing which graha went where, not a distribution to be totalled. It also breaches this document’s own standing rule against scoring and counting without an aggregation rule fixed in advance. **“Tilts toward the Moon’s side” is withdrawn.**

The nodes. An earlier version added “as do both nodes.” No source consulted uses Rahu and Ketu in D2 analysis at all. Removed.

A RULE THAT IS ATTRIBUTED — AND THE CHART DOES NOT MEET IT

One interpretive rule for the hora does carry an attribution: *Phaladeepika* ch. 3 v. 12, reported also in *Saravali* and *Brihat Jataka*. **Provenance: secondary; passage number unverified** — it comes from a practitioner page quoting the verse, and this document has already had one verse number turn out wrong when taken from a single automated read.

As quoted, it concerns natural malefics in the Sun’s hora *in odd signs* making the native strong and wealthy. Tested: **none of the three qualifies**. The Sun is in the Sun’s hora but in Taurus, an even sign; Mars and Saturn are both in the Moon’s hora. **0 of 3.**

Only the malefic limb of the verse was available to me, so no delineation is built on it. What can be said is that the chart does not satisfy the one hora rule found with a text behind it.

What remains. The construction and the placements — which graha sits in which hora, and that Jupiter is exalted and Mars debilitated in Cancer. No wealth conclusion is drawn from the D2 in this document.

13 Vimshottari dasha

Computed from the exact Moon at 15°09’20” Aquarius. Dates before interpretation.

DERIVATION

Janma nakshatra *Shatabhisha*, pada 3, lord Rahu. The Moon has traversed **63.6671%** of the asterism. Rahu’s mahadasha is 18 years, so the balance remaining at birth is $18 \times 0.363329 = \mathbf{6.5399 \text{ years}}$, or 6 years 6 months 14 days.

MAHADASHA	FROM	TO	YEARS	AGE
Rahu	7 Jun 1996	22 Dec 2002	6.54 (partial)	0–6
Jupiter	22 Dec 2002	22 Dec 2018	16	6–22
Saturn	22 Dec 2018	21 Dec 2037	19	22–41
Mercury	21 Dec 2037	22 Dec 2054	17	41–58
Ketu	22 Dec 2054	21 Dec 2061	7	58–65
Venus	21 Dec 2061	21 Dec 2081	20	65–85

What each period activates

Saturn mahadasha (2018-2037). Activates the 5th and 6th bhavas by lordship, the 7th by occupation, and the 1st, 4th and 9th by drishti. Saturn is the chart's directionally strongest graha, exalted in D9, vargottama in D10, in its own nakshatra, a great friend to both of the grahas the text calls auspicious for this lagna. Whether Saturn is itself benefic-leaning here is *inferred* from its 5th lordship, not stated — the text does not class Saturn for Kanya. On the classical evidence this is a well-supported nineteen years, and the support comes from structure rather than from ease.

Saturn/Venus (Oct 2025-Dec 2028). Activates the 9th and 2nd bhavas by lordship and the 9th by occupation, and brings in the participant of both the Dharma-Karmadhipati and Lakshmi yogas — in Lakshmi's case, both of its roles at once. Because Venus is the graha whose strength is concentrated in one layer, the classical expectation is that a Venus period is where its rashi dignity gets its opportunity to operate. Two independent caveats belong on the record: Venus is combust and debilitated in D9, and Venus is a maraka lord for this Lagna. In Jyotish this combination is read as a period of real opening in the 9th's and 2nd's matters that is not uniformly smooth.

Saturn/Rahu (2032-2035) will activate the graha sitting on the Lagna, in mutual nakshatra exchange with the Moon. Named because it is structurally the most distinctive sub-period remaining in this mahadasha.

A LIMIT WORTH STATING

Dasha lords describe which parts of the chart are live, not what happens in them. Anything more specific than that requires transits, and no transit work is included here. Where this document says a claim is timing-dependent, that is what it means.

14 Rahu and Ketu

	RAHU	KETU
Longitude	20°13'09" Virgo	20°13'09" Pisces
Bhava	1st – on the Lagna	7th
Distance to Lagna	2°03'	–
Nakshatra	Hasta pada 4	Revati pada 2
Nakshatra lord	Moon	Mercury
Dispositor	Mercury (9th, friend's sign)	Jupiter (4th, own sign)
Conjunctions	none	Saturn (8°01')

Drishti cast	none — see §6	none — see §6
Drishti received	Saturn (7th)	nothing
D9	Cancer — on the D9 Lagna	Capricorn, 7th of D9
D4	Pisces — on the D4 Lagna	Virgo, 7th of D4

TECHNICAL FACT

Rahu sits 2°03′ from the ascending degree, in the same nakshatra *and the same pada* as the Lagna. This is a degree conjunction and holds under any bhava convention; the separate claim that Rahu occupies bhava 1 also holds under both whole sign and Sripati. Its nakshatra lord is the Moon; the Moon’s nakshatra lord is Rahu. Rahu also occupies the Lagna of the navamsa and of the D4. Ketu occupies the 7th with Saturn, disposed by an own-sign Jupiter.

CLASSICAL DELINEATION

The nodes are treated as *chhaya grahas*, shadow bodies with no substance of their own, acting through the graha that disposes them and through whatever they occupy. **Provenance: standard practice for the terminology, which I have not traced to a passage; the mechanism itself is sourced** — BPHS ch. 34 vv. 16–17 give the nodes their effects by yuti with a bhava lord and by the bhava they occupy. Rahu on the Lagna is classically described as amplifying and distorting the presentation of the self — magnifying the outward signal while loosening its correspondence to what is inside. Its dispositor here is Mercury, the Lagna lord, well placed in the 9th, which is a favourable channel. Ketu in the 7th with Saturn is read as detachment or non-attachment in the partnership house, with Saturn adding weight and duration to the same house.

I am not going to reach for past-life language. It exists in the later tradition rather than in the Parashari core this reading is built on, and using it would mean importing a framework I have not declared.

POSSIBLE LIVED EXPRESSIONS

- A presented self that may land more strongly on others than it feels from the inside — an interpretive extrapolation from the amplification doctrine, not a technical finding
- Some genuine mismatch between how she is read and how she experiences herself
- Interest in what is unconventional, foreign to her origins, or outside inherited categories — reinforced by the Moon-Rahu exchange
- In the 7th: a partnership house that is simultaneously heavy (Saturn), detached or non-possessive in some register (Ketu), and well governed (own-sign Jupiter as its lord). These are not contradictory; they describe a house with several distinct characteristics at once
- Rahu’s appearance on the Lagna of D1, D9 *and* D4 is unusual repetition, and repetition across vargas is what classical method treats as significant rather than incidental

15 Synthesis by life area

Only now, and with each area separated into what the chart strongly supports, what is genuinely mixed, and what depends on period.

Identity and temperament

Strongly supported: a self constituted through orientation, belief and field rather than through self-assertion — Lagna lord in the 9th with the 9th lord, both major yogas seated there. A presentation that carries further than it feels — Rahu within 2° of the Lagna, in its pada, and on the Lagna of two other vargas.

Mixed: Mercury is the Lagna lord and is simultaneously the chart's strongest functional benefic and its second-lowest body by dig bala. It is also in Mrita avastha, which is a separate and weaker qualitative layer rather than a second strength score — see §10. Capacity and position do not match.

Timing-dependent: Mercury's own mahadasha does not begin until December 2037.

Emotional processing

Strongly supported: self-containment. The Moon receives no drishti from any graha, has no conjunction, and is vargottama. Whatever it does, it does without modification from the rest of the chart.

Mixed: Sunapha and the absence of Kemadruma are genuine supports; the dusthana placement and the waning phase are genuine pressures. An earlier version of this document treated the Moon's house as unresolved between the 6th and the 5th. That was an artefact of the bhava error corrected in section 1: under Sripati computed properly the Moon holds in the 6th, so there is no ambiguity to resolve.

Structural, and worth stating plainly: the Moon is unusually segregated from the chart's dominant nakshatra and dispositor networks. It sits outside the Sun-Mars nakshatra cycle that governs six of the nine placements, in a sealed pair with Rahu, and reports to Jupiter through Saturn rather than to Venus. That is a network fact, shown independently at two levels. Calling it "the emotional apparatus running on different machinery" imports a psychological model the configuration does not supply, so the finding is stated as segregation and interpreted separately.

Aesthetics and attraction

Strongly supported as a theme: Venus rules the 9th and the 2nd, sits in its own sign, and participates in two of the three principal yogas. Beauty and value are structurally central to this chart.

Mixed, and this is the chart's sharpest tension: Venus is combust, lowest in dig bala, and debilitated in D9, with infant avastha a minor fourth mark against. But it holds its own sign in D1, gains *cheshta bala* from retrogression, and returns to own sign in D10 and own sign plus vargottama in D7. The honest reading is not weakness but **context-dependence**: the same graha is differently resourced depending on which layer of the chart is being asked.

Timing-dependent: Venus's antardasha is running now, to December 2028. On classical logic this is when its rashi dignity has its opening. Venus's own mahadasha is not until 2061.

Relationships

Strongly supported, and convention-independent: weight and durability. The 7th holds Saturn at 56.6/60 dig bala plus Ketu, and is ruled by Jupiter in its own sign. Saturn and Ketu both hold the 7th under Sripati as well as whole sign, and Saturn's dig bala is measured from the Descendant degree rather than from a cusp, so it does not depend on the bhava question at all. The D9 7th is heavily occupied with an exalted lord.

Mixed: Jupiter rules both the 4th and the 7th, so home and partnership share a governor and move together. Jupiter carries kendradhipati dosha, is retrograde, receives both malefic special aspects, and loses its own sign in D9. Saturn in the 7th is classically delay-then-durability. Ketu there is a detaching influence in the same house.

Timing-dependent: Saturn, the 7th's principal occupant, is running its mahadasha until 2037.

Home and family

Strongly supported, and convention-independent: Jupiter in its own sign in the 4th, forming the chart's only Mahapurusha yoga, and repeating in the 4th of the D4. Jupiter holds the 4th under Sripati as well as whole sign, so the Hamsa yoga is not at risk from the bhava question. Home as a source of meaning is among the best-attested features here.

Mixed: the same qualifications as above, plus Mars's 8th-house drishti landing on Jupiter.

Money

Strongly supported: the 2nd is ruled by an own-sign Venus in a trikona; the Dharma-Karmadhipati and Lakshmi yogas both bear on fortune, Lakshmi confirmed against Phaladeepika ch. 6 v. 21 — though for a Virgo lagna that verse's two conditions are both carried by Venus alone, which makes it a cheaper formation than it looks. Venus holds its own sign in the 11th of D10, the house of gains.

Mixed: Venus's condition again, and its maraka lordship of the 2nd. The D2 contributes nothing to this section: its self-generated-versus-received reading was practitioner convention rather than doctrine, and the majority-counting that produced it is not a method any source consulted endorses. Both are withdrawn — see §12.

Career

Strongly supported: career is one of the chart's most redundantly signified topics. The 10th lord conjoins the 9th lord — a conjunction by rashi, which no bhava convention can disturb — in the 9th lord's own sign. Jupiter casts the only graha drishti reaching the 10th. And the D10 is the strongest varga examined: five grahas in own sign or exaltation, Saturn vargottama, Venus in own sign in the house of gains.

Convention-dependent in one respect: the claim that the conjunction sits *in the 9th bhava* does not hold under Sripati, which places Mercury in the 8th while Venus stays in the 9th. The yoga forms either way, since conjunction is a rashi relationship; its ninth-house seating is the part at stake. The accurate statement is that career is redundantly signified, though the precise ninth-house mechanism is bhava-convention dependent.

Mixed: Mercury as 10th lord is weak in dig bala. It is separately in Mrita avastha, which sources describe as tempering how effectively a yoga manifests rather than as a second deficit of strength. The structure is excellent; the vehicle is not effortless.

Friendships and community

Mixed to weak: the 11th is ruled by the Moon, the least connected body in the chart — unaspected, unconjunct, in a dusthana by whole sign. No graha occupies the 11th. This is the thinnest area on the chart's own evidence, and thin is not the same as bad.

Countervailing: Venus in own sign in the 11th of D10 concerns professional gains rather than friendship, and should not be borrowed to strengthen this reading.

Creativity

Mixed: the 5th is ruled by Saturn — disciplined rather than spontaneous, improving with time, on Saturn's classical significations. No occupants under either bhava convention, the earlier claim of a Moon in the 5th having been an artefact of the error corrected in section 1. So the 5th is read entirely through its lord, which is thinner evidence than an occupied house would give.

Travel, learning, worldview

Supported, with the one real convention caveat in the document: four grahas in the 9th under whole sign, including the Lagna lord and an own-sign 9th lord. Under Sripati the count drops to two, Sun and Venus, with Mercury and Mars moving to the 8th. The 9th remains the most populated house either way, but "four of nine grahas" is a whole-sign statement and is labelled as one.

Nuance from section 5: the four are not one cluster. Mercury and Mars operate through Kritika under the Sun; the Sun and Venus through Mrigashira under Mars. Two channels, not one.

Spirituality

Mixed: the 9th is strong but is doing dharma-as-orientation work rather than renunciate work. Ketu in the 7th and Saturn's self-referring nakshatra are the detachment signatures present. The 12th is ruled by the Sun, placed in the 9th — dissolution channelled into belief. No *sannyasa yoga* forms.

Recurring strengths and recurring tensions

Strengths that appear in more than one layer: the 9th house; Saturn's non-rashi strength; the career structure; Rahu's Lagna repetition across three vargas.

Tensions that appear in more than one layer: the gap between rashi dignity and every other measure, most acute in Venus; the separation of the emotional apparatus from the rest of the chart, visible at nakshatra and dispositor level independently; and the fact that both own-sign benefics carry functional complications for this specific Lagna.

16 The structural themes

If nothing at all were known about the person: the six themes this chart is actually built around, and the exact combinations that produce each.

THREE TIERS, AND WHY THEY ARE SEPARATED

INVARIANT survives the methodological choices this document had to make — principally the bhava convention, but also the aspect scheme and the node convention. **FRAMEWORK-DEPENDENT** is strong under the declared whole-sign Parashari convention and materially altered under another defensible one. **INTERPRETIVE** is a reasonable extrapolation rather than a technical finding, and is labelled so it cannot be mistaken for one.

After the bhava correction in section 1, five of the six themes are invariant. Only the ninth-house concentration is genuinely at stake.

I

FRAMEWORK-DEPENDENT

The ninth house is the chart

Four of nine grahas occupy it under whole sign, including the Lagna lord, the 10th lord, and its own lord in its own sign. Two of the three principal yogas — Dharma-Karmadhipati and Lakshmi — are seated there; the third, Hamsa, is in the 4th. Identity, livelihood, fortune and value all route through one house.

Sun + Mars + Mercury + Venus in Taurus in the 9th · Mercury = lord of 1 and 10 · Venus = lord of 9 and 2, in own sign · Dharma-Karmadhipati and Lakshmi both formed here · BPHS ch. 34 vv. 31–32 names the Venus–Mercury yuti as yoga-producing for Kanya specifically (low textual stability) · Lakshmi per Phaladeepika ch. 6 v. 21, both of whose roles collapse onto Venus for a Virgo lagna — one of only two lagnas where they do

II

INVARIANT

Venus is resourced differently at every layer

The single most important nuance in the chart, and the one a surface reading gets backwards in both directions. Own sign is real, and so is combustion, the lowest dig bala present, and debilitation in the navamsa. But retrogression is a *cheshta bala* strength rather than a weakness, baladi avastha is a minor modifier, and Venus returns to own sign in D10 and own sign plus vargottama in D7. Not weak. Context-dependent.

weakening: combust 4°32′ against an 8° retrograde orb · dig bala 9.0/60 · D9 Virgo debilitated · Bala avastha (minor) | strengthening: own sign Taurus · D7 Taurus own sign vargottama · D10 Libra own sign in the 11th · retrogression, which cheshta bala counts as strength — not as the weakness a modern reading would make it

III

INVARIANT

Saturn is the most consistently supported graha across the non-rashi measures actually computed. It holds no rashi dignity whatsoever, and it leads the chart on directional strength, sits in its own nakshatra, exalts in the navamsa, is vargottama in the career varga, aspects six of the other eight bodies while receiving no drishti itself, rules a trikona, and has no compound enemies. It is also currently running its nineteen-year mahadasha. The claim is scoped deliberately: this document declines to compute Shadbala, Ishta and Kashta phala, so it cannot say Saturn leads on *every* measure, only on the non-rashi measures actually calculated here.

Saturn Pisces, 7th · dig bala 56.6/60, the highest present · own nakshatra Uttara Bhadrapada · D9 Libra exalted · D10 Pisces vargottama · lord of 5 and 6 · drishti on 1, 4, 9 · mahadasha Dec 2018 to Dec 2037

IV

INVARIANT

The Moon is segregated from the chart's dominant networks

Two independent layers say the same thing. In the nakshatra network the Moon sits in a sealed pair with Rahu while six placements converge on the Sun-Mars cycle. In the dispositor chains the Moon reports to Jupiter while the entire ninth-house group reports to Venus. And no graha aspects the Moon at all. All three are rashi- or nakshatra-level facts, so none depends on the bhava convention.

INTERPRETIVE Reading this as a separation between emotional and public life is an extrapolation. The network separation is the finding; the psychological gloss is not.

Moon in Shatabhisha (Rahu) ↔ Rahu in Hasta (Moon), a closed nakshatra parivartana · Moon → Saturn → Jupiter, while Sun/Mars/Mercury/Rahu → Venus · zero drishti received · no conjunction · vargottama in Aquarius

V

INVARIANT

Rahu is conjunct the Ascendant degree

Stated as a degree conjunction rather than as a house placement, because that is the form that survives every bhava convention: 2°03' from the ascending degree, in the same nakshatra and the same pada. Bhava membership is a separate and weaker claim, though it also holds — Rahu is in the 1st under whole sign and under Sripati computed correctly. Rahu additionally occupies the Lagna rashi of the navamsa and of the D4.

Rahu 20°13' Virgo, Hasta pada 4 · Lagna 22°16' Virgo, Hasta pada 4 · D9 Lagna Cancer with Rahu · D4 Lagna Pisces with Rahu · dispositor Mercury, the Lagna lord

VI

INVARIANT

Both own-sign benefics are functionally complicated for this Lagna

Jupiter owns the 4th and 7th and nothing else, taking kendradhipati dosha, and is the chart's only Mahapurusha yoga while receiving both malefic special aspects. Venus owns the 9th but also the 2nd, a maraka house. The natural reading and the functional reading point different ways, and BPHS ch. 34 vv. 31-32 settles it for this lagna by naming Guru a malefic for Kanya outright.

Jupiter own sign Sagittarius in the 4th = Hamsa yoga · lord of 4 and 7, both kendras = kendradhipati dosha · retrograde · receives Mars 8th and Saturn 10th drishti · D9 Libra, own sign not retained · Venus lord of 9 (trikona) and 2 (maraka)

17 Reproduction appendix

Everything a technically competent reader would need to recompute this chart and get the same numbers, including the conventions that were choices rather than facts.

CONVENTIONS THAT WERE CHOICES

CHOICE	WHAT WAS USED	WHAT ELSE EXISTS
Bhava	Whole sign for the reading; Sripati (Porphyry madhyas, sandhis at midpoints between adjacent madhyas) as cross-check	Placidus-madhya gives the same two shifts. Equal-house and Koch would differ.
Nodes	Mean node	True node differs by 63.4′ here; same rashi, nakshatra and pada
Drishti	Sign-based graha drishti; 7th for all, plus Mars 4/8, Jupiter 5/9, Saturn 3/10	Degree-based virupa drishti would give partial values rather than binary
Node drishti	Excluded. BPHS ch. 34 vv. 16–17 give the nodes effects by conjunction and occupation only	Some authorities give 5/7/9 (traced to the Khemraj 1932 edition), some 3/11, some none. Ketu is argued to cast none at all.
Combustion orbs	Moon 12°, Mars 17°, Mercury 14° (12° retro), Jupiter 11°, Venus 10° (8° retro), Saturn 15°	Orb tables vary by a degree or two between authorities

Rashi sandhi	Not used. No sourced degree threshold was found, so no graha is classed as being in rashi sandhi	Secondary sources give 0°20′ and, by worked example, about 0°05′. Gandanta (Parashara, secondary) applies only at Pisces–Aries, Cancer–Leo and Scorpio–Sagittarius
---------------------	---	--

DIVISIONAL CHART FORMULAE

VARGA	RULE IMPLEMENTED
D9 Navamsa	$\text{index} = (\text{rashi} \times 9 + \text{part}) \bmod 12$, $\text{part} = \text{floor}(\text{deg} / 3^{\circ}20')$. Movable signs start from themselves, fixed from the 9th, dual from the 5th – this formula reproduces all three.
D10 Dashamsha	$\text{part} = \text{floor}(\text{deg} / 3^{\circ})$. Odd rashi: $(\text{rashi} + \text{part}) \bmod 12$. Even rashi: $(\text{rashi} + 8 + \text{part}) \bmod 12$.
D4 Chaturthamsha	$\text{part} = \text{floor}(\text{deg} / 7^{\circ}30')$; $\text{index} = (\text{rashi} + \text{part} \times 3) \bmod 12$.
D7 Saptamsha	$\text{part} = \text{floor}(\text{deg} / 4^{\circ}17'08'')$. Odd: $(\text{rashi} + \text{part}) \bmod 12$. Even: $(\text{rashi} + 6 + \text{part}) \bmod 12$.
D2 Hora	15° halves. Odd rashi: first half Sun's hora (Leo), second Moon's (Cancer). Even rashi: reversed. Secondary sources report the classics unanimous on this construction. Used for <i>placement only</i> – the wealth interpretation is withdrawn (§12) and the nodes are not used.

DIG BALA

Points of maximum strength: Lagna for Jupiter and Mercury, the 4th cusp for Moon and Venus, the 7th for Saturn, the 10th for Sun and Mars. Virupas = (angular distance from the point *opposite* the point of maximum strength) ÷ 3, giving 0 at the weak point and 60 at the strong one. Computed from the actual ecliptic longitudes of the Ascendant and MC, not from bhava cusps, which is why the dig bala figures are unaffected by the bhava convention.

BALADI AVASTHA

Five states of 6° each within the rashi. In odd rashis the order runs Bala, Kumara, Yuva, Vriddha, Mrita from 0°; in even rashis the order is reversed, so the count runs from 30° downward. Cross-check: 12°–18° is Yuva under both parities, which the sources state independently and which the implementation reproduces.

Fractions, corrected. Sources give Bala $\frac{1}{4}$, Kumara $\frac{1}{2}$, Yuva full, Vriddha “*minimum*”, Mrita “*gives no result*”. An earlier version of this appendix rendered Vriddha as $\frac{1}{4}$ and Mrita as “negligible”; both were my specificity, not the sources’. The fractions are **not applied** here in any case, and what they modify is not stated in commensurable units by any source consulted.

Nodes. No source consulted states whether baladi applies to Rahu and Ketu. Their row in §10 is computed by the same arithmetic and marked as not relied on.

VIMSHOTTARI DATE ARITHMETIC

STEP	CONVENTION USED
Nakshatra fraction	Moon's longitude within the 13°20′ asterism, divided by 13°20′. Here 63.6671%.
Balance at birth	$18 \times (1 - 0.636671) = 6.5399$ years of Rahu
Year length	365.2425 days , the Gregorian mean year

Date arithmetic	Decimal years × 365.2425, added as a <code>timedelta</code> to the birth instant. No rounding until the date is printed.
The “6y 6m 14d” figure	A nominal 12-month, 30-day breakdown of the decimal, shown for readability only. It is not what the dates were computed from – those come from the decimal directly.

SENSITIVITY OF THE DASHA DATES

The year-length convention matters more than it looks. Against 365.25 (Julian year) the difference is under a day across the whole sequence and can be ignored. Against a 360-day *savana* year, which some traditions use, the first mahadasha boundary moves by roughly 35 days and the error compounds forward.

So the exact dates in section 13 are exact *given 365.2425*. A practitioner using *savana* years will get materially different boundaries, and the antardasha and pratyantardasha dates should be read as precise to within days rather than to the day.

WHAT “COMPUTED EXACTLY” MEANS AND DOES NOT MEAN

Dig bala is computed exactly in the sense that it has a single unambiguous formula, stated above, applied without approximation. Baladi *classification* is equally unambiguous and was recomputed from degrees independently; its *weight scheme* is not — the Vriddha and Mrita values differ in wording between sources and the nodes are unaddressed, so no baladi number is used anywhere. It does not mean the upstream choices are beyond dispute — *ayanamsha*, node convention, *drishti* scheme and *bhava* convention are all choices, and they are listed above precisely so a reader can vary them.

ON CITATIONS, STATED PLAINLY

A LIMIT THIS DOCUMENT CANNOT CURRENTLY FIX

Most of this reading was written with **no primary source available**, and it still carries unsourced phrasing of the form “classical texts hold” and “standard practice treats”. Where a passage has since been reached, it is cited in full: text, translation, chapter and verse, and confidence about textual stability.

An error in this section, recorded rather than repaired. An earlier version of this paragraph said the phrase “Parashara treats” appeared only in a superseded draft. It did not — two instances were still live in sections 3 and 14 at the time that sentence was written. A claim that a cleanup had happened was itself the last uncleaned thing. Both instances are now fixed: one was an invented attribution and is withdrawn, the other is relabelled standard practice and given the verse that does support its mechanism.

Rather than supply citations I cannot verify, I have supplied none. An invented chapter and verse would be worse than an admitted gap, and it would be indistinguishable from a real one to any reader who trusted it. A companion provenance audit classifies every doctrinal claim in this document as classical, standard later practice, school-dependent, or my own synthesis, and names the ones that most need checking — the *nakshatra-chain* apparatus and the functional *benefic* table above all.

Until those claims are checked against texts, this document should be read as *a rigorous computation with a carefully labelled interpretation attached*, not as a sourced presentation of classical doctrine.

Computed with Swiss Ephemeris 2.10.03 under Lahiri ayanamsha, Parashari whole-sign bhavas, mean nodes. Full parameters, formulae and convention choices in section 17. Dig bala computed from its single unambiguous formula; baladi avastha classified from degrees but carrying no numerical weight, and not treated as a Shadbala component; Shadbala, Ishta and Kashta phala omitted rather than approximated, for the reasons given in section 10. No doctrinal claim in this document carries a citation, because no primary source was available — section 17 explains what follows from that. No tropical comparison and no material from any other framework appears anywhere.
